The Finnish Contemporary

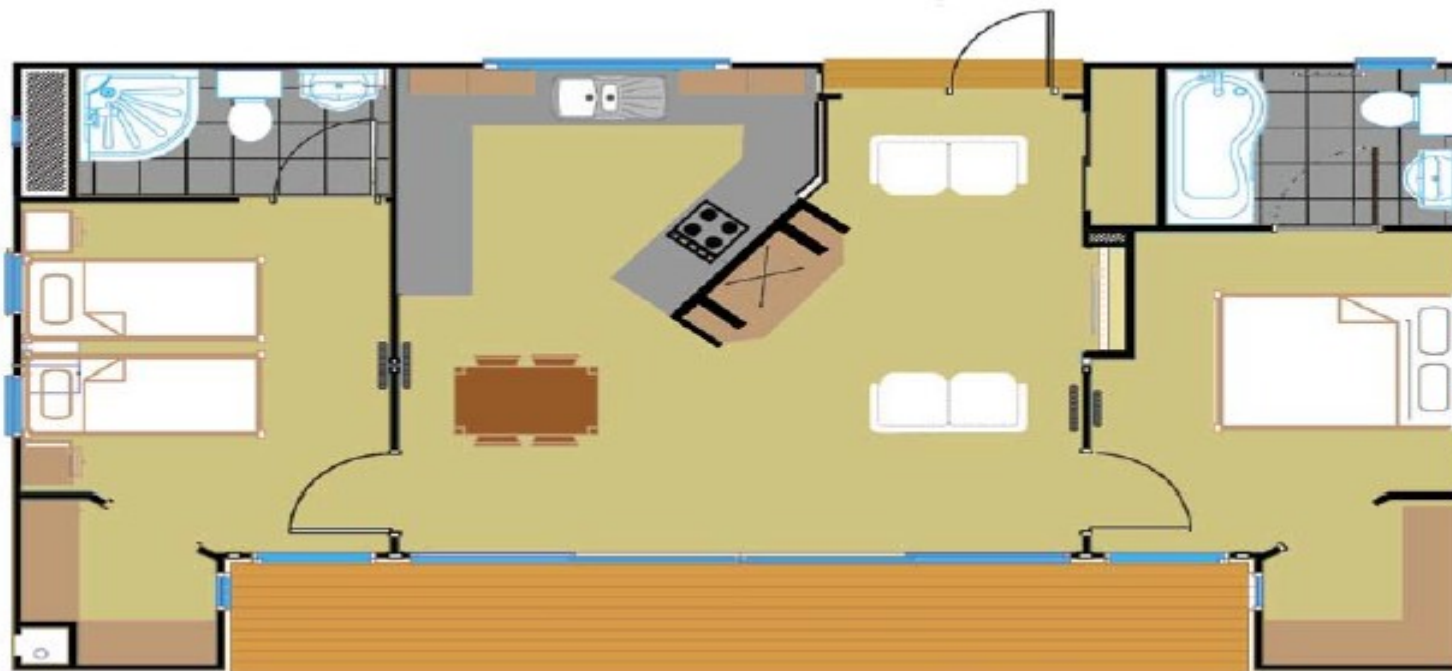

The Finnish Contemporary is for people who want clean lines and a modern spirit in their home. It is a unique model in our range, demonstrating that not all homes need to be traditionally built.

The central features of this design are the expansive panes of glass, offering an abundance of light and creating visual harmony with the surrounded landscape from all of the rooms.

The Finnish Contemporary can have any number of attractive interior features and the property illustrated has 'Home Automation', allowing full control of entertainment, lighting and heating from one remote control. Wider doorways and the predominantly open-plan layout makes it wheelchair-friendly.

Our buildings are generally bespoke designs, tailored to our customers' requirements. The best results are produced working in partnership with you, ensuring that the finished result is your ideal home.
